Delhi Technological University (DTU) — B.Tech, Electrical Engineering | CGPA: 7.5 | July 2022 – May 2026
Dashmesh Public School, Delhi | Class 12th: 83.4% | Class 10th: 84.2%

EXPERIENCE

Afterquery — Software Developer

Feb 2026 – June 2026 | Part Time/Remote

- Delivered task based backend systems and RESTful APIs for Project Pluto, following engineering best practices.
- Completed task based full stack features end to end from system design through implementation and deployment.
- Handled task based integrations of third-party services and business logic into core product workflows.

Creative Business Labs Pvt. Ltd. — AI Full Stack Developer

June 2024 – July 2025 | Internship/Remote

- Built core features for an Apollo style mental wellness platform appointment booking, therapist scheduling, and patient management for 50+ therapists, using React.js, Node.js, and FastAPI.
- Designed a microservices based backend separating booking, payments, and user management, and integrated Stripe to process 1,000+ appointment transactions with secure refund and subscription handling.
- Optimized RESTful APIs with Redis caching and query tuning, reducing average response time by ~30% and supporting real time availability checks across concurrent bookings.
- Added LLM powered features, including AI conversational support and RAG pipelines using OpenAI and deployed everything on AWS.
- Debugged and fixed 20+ production issues reported by users, including booking conflicts and payment failures, improving platform reliability and reducing repeat complaints.

PROJECTS

PayFlow | Payment Platform with Microservices

Java 21, Spring Boot, Spring Cloud Gateway, PostgreSQL, Redis, Apache Kafka, Docker, Maven, JWT, Flyway, Prometheus, Grafana

- Built a production-style payment platform with API Gateway, authentication, merchant, payment, provider, and ledger microservices supporting secure payment and QR/UPI workflows.
- Implemented idempotent payment processing, transactional outbox, Kafka-based event communication, provider webhook verification, Redis rate limiting, and JWT/API-key authentication to prevent duplicate charges and ensure reliable processing.
- Designed a PostgreSQL double-entry ledger with balanced financial postings, database-per-service architecture, Flyway migrations, Docker Compose deployment, health checks, Prometheus metrics, and Grafana monitoring.

SwarmSync | BitTorrent Inspired P2P File Sharing System

C++17, TCP Sockets, SHA-256, CMake, Docker, GitHub Actions, GoogleTest

- Built a BitTorrent-inspired P2P file-sharing system, splitting large files into SHA-256 verified chunks for decentralized multi-peer distribution.
- Implemented tracker, seeder, peer discovery, concurrent TCP transfers, retries, failover, and resume-safe downloads with final file-integrity verification.
- Designed a production-minded C++ architecture using RAII, bounded connections, token-based private-swarm access, protocol validation, and 21 automated unit/integration tests.

TECHNICAL SKILLS

Languages: Java, C/C++, Python, JavaScript, TypeScript, SQL

Frontend: React.js, Next.js, HTML5, CSS3, Tailwind CSS

Backend: Node.js, Express.js, Socket.io, FastAPIs, REST APIs, Microservices

Database & Cloud: MongoDB, MySQL, PostgreSQL, Redis, AWS

DevOps & Tools: Linux/Ubuntu, Git, GitHub, GitHub Actions, CI/CD, Docker, Vercel, Netlify, Render, VS Code, Postman

AI / Integrations: OpenAI API, LangChain, RAG Architecture, LLM

Core Coursework: OOPs, DBMS, DSA, LLD
