

FIROZ AHMAD

SOFTWARE ENGINEER | BACKEND & FULL-STACK | GLOBAL REMOTE

Delhi, India (IST) | Open to global remote roles | +91-9315742128 | firozahmed709p@gmail.com

[LinkedIn](#) | [GitHub](#) | [Portfolio](#) | [LeetCode](#) | [Reddit](#) | [Twitter](#)

PROFILE

Software engineer experienced in building secure, production-oriented backend and full-stack systems with Java/Spring Boot, Node.js, React, and FastAPI. Strong in REST APIs, microservices, PostgreSQL, Redis, Kafka, Docker, payment workflows, and AI-enabled product features. Comfortable owning a feature end to end – from design through deployment and monitoring while collaborating asynchronously across time zones.

EXPERIENCE

Handshake AI / Crossing Hurdles | Expert Contributor – Project Sentinel Ultra [Platform](#) Jun 2026 – Aug 2026

- Reviewed and validated 20+ Harbor-format SWE-bench-style coding tasks as an Expert Contributor, auditing task instructions, test suites, and golden-patch oracles for solvability, leakage, and reward-hacking risk.
- Diagnosed factual and architectural errors in task specifications (e.g., mis-classified system integrations) and rewrote instructions to satisfy both solvability and an automated LLM-judge prescriptiveness rubric across multiple iteration rounds.
- Strengthened test suites by adding missing fail-to-pass and regression (pass-to-pass) coverage, verified via direct patch-application and git-hygiene checks.
- Resolved task packaging and environment-configuration issues (Docker builds, resource/network settings) to meet platform submission requirements.

AfterQuery | Software Developer, Part-Time – Remote [Platform](#) Feb 2026 – Jun 2026

- Delivered task-based backend systems and RESTful APIs for Project Pluto, following production engineering practices used by a distributed, US-based engineering team.
- Completed full-stack features end to end, from system design through implementation, testing, and deployment.
- Integrated third-party services and core business logic into existing product workflows, coordinating asynchronously with remote stakeholders.

Creative Business Labs | AI Full-Stack Developer Intern – Remote [Live](#) Jun 2024 – Jul 2025

- Built booking, therapist scheduling, and patient-management features for a mental-wellness platform serving 50+ therapists.
- Designed booking, payment, and user-management services and integrated Stripe for 1,000+ appointment transactions, subscriptions, and refunds.
- Reduced average API response time by about 30% through Redis caching and query tuning, supporting real-time availability checks.
- Delivered OpenAI-powered conversational support and RAG capabilities on AWS; resolved 20+ production issues involving booking conflicts and payment failures.

SELECTED PROJECTS

PayFlow – Payment Processing Platform | [GitHub](#)

Java 21, Spring Boot, Spring Cloud Gateway, PostgreSQL, Redis, Kafka, Docker, Flyway, Prometheus, Grafana

- Built a seven-module, production-style payment platform with API gateway, authentication, merchant, payment, provider, and double-entry ledger services.
- Implemented database-backed idempotency, a transactional outbox, Kafka events, HMAC webhook verification, and JWT and API-key security with Redis rate limiting.
- Designed isolated PostgreSQL service databases with Flyway migrations, Docker Compose, health checks, Prometheus metrics, and Grafana monitoring.

SwarmSync – BitTorrent-Inspired P2P File-Sharing System | [GitHub](#)

C++17, TCP Sockets, SHA-256, CMake, Docker, GitHub Actions, GoogleTest

- Built a BitTorrent-inspired P2P file-sharing system, splitting large files into SHA-256 verified chunks for decentralized multi-peer distribution.
- Implemented tracker, seeder, peer discovery, concurrent TCP transfers, retries, failover, and resume-safe downloads with final file-integrity verification.
- Designed a production-minded C++ architecture using RAII, bounded connections, token-based private-swarm access, protocol validation, and 21 automated unit and integration tests.

DriveVault – Car Rental Platform | [Live](#) | [GitHub](#)

React, Node.js, Express.js, MongoDB, Tailwind CSS, JWT, ImageKit

- Built a live MERN car-rental platform with JWT-backed customer and admin access, vehicle browsing, pickup-date selection, booking history, and inventory management.
- Implemented secure authentication and ImageKit media uploads for managing vehicle images.

CareerOS AI – AI Career Operating System | [Live](#) | [GitHub](#)

React, Node.js, Express.js, MongoDB, Gemini AI, JWT, REST APIs

- Built an AI-powered career platform with resume parsing, job matching, interview preparation, and application tracking.
- Implemented a MERN architecture with Gemini AI integration, JWT authentication, and scalable REST APIs.

DocOnGo AI – AI-Assisted Health Guidance | [Live](#) | [GitHub](#)

React, Vite, Tailwind CSS, Axios, React Markdown, Vercel

- Built a responsive frontend with authenticated user flows, Axios API integration, Markdown response rendering, and a Vercel deployment.

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, Python, SQL, C/C++ (C++17)

Backend & Architecture: Spring Boot, Spring Cloud Gateway, Node.js, Express.js, FastAPI, REST APIs, Microservices, JWT, RBAC, API Keys, Webhooks, Redis, Apache Kafka, TCP Sockets

Data, Cloud & DevOps: PostgreSQL, MongoDB, MySQL, Docker, Maven, CMake, Flyway, Git, GitHub Actions, CI/CD, AWS, Vercel, Render, Linux/Ubuntu, Prometheus, Grafana, GoogleTest, Postman

Frontend & AI: React, Next.js, Tailwind CSS, HTML5/CSS3, Axios, OpenAI API, Gemini API, LangChain, RAG, LLM Integration, ImageKit

Remote & Freelance: Async communication across time zones, client scoping & estimation, independent end-to-end ownership, Agile/Scrum, code reviews, documentation, progress reporting

Foundations: Data Structures and Algorithms, Object-Oriented Programming, DBMS, System Design

EDUCATION

Delhi Technological University (DTU) – B.Tech, Electrical Engineering | CGPA 7.5/10

Jul 2022 – May 2026
